Okay 

MAKES
EVERYTHING
BETTER

Okay Packaging presents a line of upscale food containers designed and manufactured, Proudly in Malaysia OKAY's industry-leading food containers are available in various shapes, sizes and every Pantone color. Manufactured with only FDA approved materials, Okay containers are safe to use in any food application.

At Okay, we strongly believe in the mantra of **Reduce, Reuse, Recycle**. Accordingly, we have developed our products to meet both the functional requirements of plastic containers and the need for environmental responsibility. Reusability is one of the key benefits. Okay products are both environmentally friendly and sustainable.

The reusability of our containers make our **value added options** a great way for you to make a lasting impressions on your customers and enhance your brand. Okay products can be made to order with proprietary branding, custom colors and other features – a cost efficient and effective way to ensure continued brand exposure. We work with our clients directly to create solutions to suit all of their packaging needs.

OKAY was founded in the year of 2003. Specializing in the manufacturing and exporting of disposable plastic containers, we take pride in the cleanliness and professional standards of our products. Consistently committed to producing first-rate quality products, we never compromise on materials or processes. OKAY provides container and PP based products, and exports its wide range of products to countries all across the globe.

FEATURES

DISHWASHER SAFE

Okay containers are made from residential dishwasher safe materials. For dishwashers that have an exposed heating element, the containers must be securely placed on the top rack. Direct contact with exposed heating elements will result in deformation and possible melting.

MICROWAVE

Okay containers are made from microwave safe materials and are suitable for reheating precooked foods. Frozen food must be defrosted before reheating. Never heat beyond 100°C/212°F (the temperature of boiling water). Some foods, such as those high in oils, fats, sugars, or salts, can reach temperatures above 100°C/212°F when heated too quickly and/or for too long. Such overheating can cause damage and potentially melt the container. Should this occur, discard both the container and its contents. Never use a Okay container in a conventional oven, convection oven, toaster oven or on a stovetop heating element. Always leave the lid open when using the microwave. Follow the manufacturer's guidelines when using in a microwave oven and use care when handling the container with hot contents.

FREEZER

Okay containers are made using freezer capable and safe materials suitable for both refrigerator and freezer use. In freezer applications, the material becomes increasingly brittle when exposed to lower subzero temperatures. In the event that a container cracks or breaks, normally as a result of an impact, discard both the container and its contents.
